FAQ

Q:Are metal bins better than plastic?

A:Unlike steel, which is difficult to clean, plastic containers can be easily hosed down and cleaned, reducing unpleasant odors as well as the risk of attracting pests, like rats and roaches.

Q:What are 3 types of waste bins?

A:Different waste bin types
General waste bin (green or grey)
Recycling waste bin (blue)
Food waste caddy (black)

Q:What household tool is used as a bin for refuse and waste?

A:**Tool cabinet waste bin** is one of the most commonly used tools in rubbish collection and removal. One of the reasons why it is widely used is because of its multi-purpose functionalities.

Q:Why should we use metal instead of plastic?

A:More heat-resistant – metals tend to have a higher melting point than plastics.
Operating temperature – metal can be used in extreme hot and cold temperatures. Metal has a higher tensile strength than plastic. **Tool cabinet waste bin** is durable and easy to clean.

Q:What are the disadvantages of metal bin?

A:The disadvantages of metal packaging mainly include: poor chemical stability, especially steel materials are easy to rust, generally should be coated with anti-rust materials; acid and alkali resistance is weak, when packaging acidic materials (especially food), metal ions will be precipitated
